Assessment:  
Assignments: 14 %  
Quizzes 8 %  
Mid-term 20 %  
Final 58 %  
Date: Tuesday, Feb. 25, 12:30~1:20pm

Note: Failure to complete all laboratory requirements will result in a grade of N being awarded for the course.

Due dates for assignments:

Course Objective:  
To introduce various fundamental topics of current and future wireless communication systems, including propagation channel modelling, digital communication over fading channel, fading mitigation techniques, multiple access techniques, spread spectrum techniques and system capacity analysis.

Prerequisites:  
ELEC 350 required, ELEC 450 (basics of digital communications and probability theory) highly recommended.

Course Homepage:

The final grade obtained from the above marking scheme will be based on the following percentage-to-grade point conversion:

Deferred exams will normally be written at the start of the student's next academic term; i.e., approximately 4 months following the deferral of the exam.

**Assignments:**

The assignments are in the drop box in ELW on the due dates. Late assignment will not be accepted. The assignment with the lowest grade will not be counted. Some assignments may require the use of mathematical software (such as Matlab and Maple) for calculation and/or plotting.

**Quizzes:**

There will be two in-class quizzes. They will be closed book and closed note. One is on statistical fading channel model before the midterm. The other is on fading mitigation techniques after the midterm. Each quiz counts 4% to the final grade.
Exams:
There will be one midterm exam and a final exam. The midterm is tentatively scheduled in class on Tuesday, February 25. Both the midterm and the final will be close-book exams. One single-side formulae sheet is allowed for midterm and two single-side sheets for final.

Syllabus:
• Introduction to wireless communications.
• Wireless channel models: path loss, shadowing, and multi-path fading.
• Digital modulation techniques and their performance over fading channels.
• Fading mitigation techniques: diversity techniques and multicarrier modulation.
• Spread spectrum and multiple access techniques.
• Cellular concept and selected advanced topics.

Note to Students:
Students who have issues with the conduct of the course should discuss them with the instructor first. If these discussions do not resolve the issue, then students should feel free to contact the ECE Chair by email or the ECE Chair's secretary to set up an appointment.

Standards of Professional Behaviour  
You are advised to read the Faculty of Engineering document Standards for Professional Behaviour at http://www.uvic.ca/engineering/current/undergrad/index.php#section0-25 which contains important information regarding conduct in courses, labs, and in the general use of facilities.

Cheating, plagiarism and other forms of academic fraud are taken very seriously by both the University and the Department. You should consult http://web.uvic.ca/calendar2013/FACS/UnIn/UARe/PoAcI.html for the UVic policy on academic integrity.

Plagiarism detection software may be used to aid the instructor and/or TA's in the review and grading of some or all of the work you submit.
