Course Description

1. Course Objectives: Students will learn about hardware-software interplay and tradeoffs arising in modern embedded systems and associated system integration and interfacing issues.

2. Learning Outcomes: Students will develop a general understanding of the operation, design, application, and programming of 32-bit microprocessor-based systems, and will be able to apply studied concepts to any advanced embedded system.

3. Syllabus (tentative hours):
   - Embedded systems (2) – Applications, technologies, trends.
   - Microprocessors (4) – Digital arithmetic, ISA, datapath and control.
   - Memory hierarchy (8) – Locality, caching, virtual memory.
   - I/O interfacing (10) – Handshaking, interface circuits, interrupts, DMA.
   - Internal and external communication (8) – Signaling, protocols, buses, networks.
   - Embedded software (4) – C programming, operating system concepts.

Note to Students:

*Students who have issues with the conduct of the course should discuss them with the instructor first. If these discussions do not resolve the issue, then students should feel free to contact the ECE Chair by email or the ECE Chair's Secretary eceasst@uvic.ca to set up an appointment.*
