Course Description

1. **Course Objectives**
   - To apply software requirement and design processes in the implementation of software components in electrical and computer engineering systems
   - To apply engineering system software concepts to portable devices, embedded systems, real-time systems, and multi-processor systems

2. **Learning Outcomes**
   - Able to understand the role of system software and their synergy with hardware and applications in engineering computer systems
   - Able to use and extend fundamental system software and hardware concepts in computer systems
   - Able to identify potential hazards and apply system software principles to solve unique electrical and computer engineering problems in various domains (e.g., mechatronics, signal processing)

3. **Syllabus**

System software principles, components, usage, protection, and their relation to hardware and engineering systems. Modern operating systems characteristics and engineering applications; portable operating system interface standard. Requirements, design, development, and maintenance of complex software for portable devices, real-time systems, and multi-processor systems.
