Deferred exams will normally be written at the start of the student’s next academic term; i.e., approximately 4 months following the deferral of the exam.
Course Description
1. Course Objective: to provide students with the basic skills needed to analyze, formalize, and solve Computer Vision problems.

2. Learning Outcomes
   Upon completion of this course, the students will be able to:
   - understand basic concepts, mathematical tools, and algorithms for manipulation of digital images
   - implement an algorithm to solve a specific computer vision problem
   - evaluate the performance of the algorithm using quantitative evaluation methods
   - assess the social/economical/cultural impact of novel computer vision technologies

3. Syllabus
   Overview of the main concepts and methods in computer vision; geometry and physics of imaging, as related to image formation and representation; image preprocessing for feature extraction; image segmentation; binary shape analysis; texture analysis; motion analysis; feature selection and pattern recognition; in-class and on-line discussions on the social, economical, and cultural impact of various modern computer vision technologies.

Note to Students:
Students who have issues with the conduct of the course should discuss them with the instructor first. If these discussions do not resolve the issue, then students should feel free to contact the ECE Chair by email or the ECE Chair's Secretary eceasst@uvic.ca to set up an appointment.
