Consent Form
(Use of Student Source Code for Research Purposes)

The SENG475/ECE596C course instructor, Michael Adams, conducts research in software-related areas. Some of this research involves the analysis of source code for various purposes, including (but not limited to):

- developing better methods for teaching programming;

- studying how programming languages and libraries are used in practice; and

- detecting bugs or bad programming practices.

For some types of research, being able to consider source code submitted by students as part of their course work in SENG475/ECE596C would be extremely beneficial.

The purpose of this form is to obtain your consent to use the source code that you submit as part of your course work in SENG475/ECE596C for research purposes. Any use of your source code would be subject to the following terms:

1. Only members of the instructor's research team will be given access to your source code. Normally, this team would consist of the instructor and one of his graduate students.

2. The source code will not be distributed to anyone outside the research team.

3. Small excerpts of source code are permitted to be reproduced in research publications for example purposes, provided that any information that would identify the source code's author is removed.

I voluntarily agree to allow the code that I submit as part of my course work in SENG475/ECE596C to be used for research purposes, subject to the terms described above.
